

Physics Stretch and Challenge

BIG BANG AR

This is coolest thing you will have ever seen. From CERN and Google, it tells the story of the big bang with augmented reality. Give it a try.

THE PHYSICS OF SANTA CLAUS

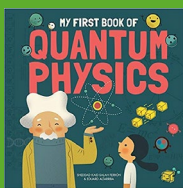

Calculations maintain that the laws of physics should prevent Santa Claus from delivering all his gifts and that Santa would burn up in the atmosphere if he tried. The internet magazine, forskning.no, has put together a team of four top researchers to look into the case. The panel's conclusion is clear: Santa can do the job and Christmas is saved!

MARVIN AND MILO

I know that I have put this on before, but it really is excellent. Try some of these rather than idling away hours on TikTok. (I don't know what that is, but my children have advised me!)

QUANTUM PHYSICS

There is a whole lot more to Physics than what I tell you or the GCSE examiners are interested in. Try this book. It is very accessible and full of pictures and diagrams but explains the basic concepts very well.

SKY HOOK

We learn Physics for a reason. It is so we can build things like this. This is how we could colonise space. We may need to. The rest of the channel is excellent too.

BRIDGE BASHER

Inspired by your Christmas Chasm Crossing Challenge? Expand your bridge building skills on this app.
